Art Unit: 3682

Claim(s) 3 is/are rejected under 35 U.S.C. § 112, first and/or second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and/or for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Is it .2um or 200um?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4, 8-9, 13, 15, and 21-23 (and 3 to the extent definite) are rejected under 35 U.S.C. § 102(a), as being anticipated by Japan '922. The examiner finds all claimed subject matter to be present.

As set forth in the Japanese trial transcript, an "h" of 5um (trans. P16, line 19) and a "delta C" of 3.3350 um (translation p.16, penultimate line), and pitch (width) in the reference of 150-300 um (page 16, line 10) overlaps the range of the parent patent claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-5, 10, 13-14, 18-20, 24-30 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Japan '922 as set forth in the rejection of claims 1-2, 4, 8-9, 15, and 21-23 (and 3 to the extent definite) above, and further in view of engineering design choice.

The examiner finds that the broad provisions of excluding the exact range of the Japan '922 Patent *vis-à-vis* that disclosed by the reference, and of providing helical continuous versus non-helical grooves and discontinuous versus continuous peaks, or vice-versa, recited as a matter of indifference in the patent specification, solve no stated problems insofar as the record is concerned and, accordingly, would have been an obvious matter of design choice. See *In re Kuhle*, 526 F.2d 553, 188 USPQ 7 (CCPA 1975).

In accordance with 37 CFR 1.175(b)(1), a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) must be received before this reissue application can be allowed.

Art Unit: 3682

Claims 1-5, 8-10, 13-13-15, 18-30 are rejected as being based upon a defective reissue oath under 35 U.S.C. 251. See 37 CFR 1.175. The nature of the defect is set forth above.

Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251. An example of acceptable language to be used in the supplemental oath/declaration is as follows:

"Every error in the patent which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant."

The Peterson case is relevant to establish that range overlap establishes anticipation.
